

LAB 17

Tool Exploration -Wireshark

OBSERVATION:

tcp - port == 80 || udp - port == 80

Packet details:

The middle section of the panel, detail panel, presents the protocol and protocol fields of the selected packet in a collapsible format. We can apply additional filters and right click on protocol for a detailed view.

At the bottom panel, raw data of the selected packet is seen in hexadecimal format. It is called as hex dump. It contains 16 hexadecimal bytes and 16 ASCII bytes alongside the data offset.
